

CLAIMS

What is claimed is:

1. An apparatus comprising:

a support surface having a seat portion and a back portion, wherein the seat portion and the back portion form a non-planar surface, the seat portion having an aperture opening toward the back portion so that when a human is supported on the support surface the human's anus is positioned over the aperture.

2. The apparatus of claim 1, wherein the back portion having an aperture that merges with the aperture in the seat portion.

3. The apparatus of claim 1, further comprising:

means for viewing to view a portion of the human visible through the aperture.

4. The apparatus of claim 1, further comprising:

means for privacy to limit a view of the human.

5. The apparatus of claim 1, further comprising:

means for providing mobility to the support surface.

6. The apparatus of claim 1, wherein the support surface is selected from the group consisting of a chair and a bench.
7. The apparatus of claim 1, wherein the seat portion is concave.
8. The apparatus of claim 1, further comprising:
means for supporting the human's arms.
9. The apparatus of claim 1, further comprising:
an armrest coupled with the support surface.
10. The apparatus of claim 9, wherein the armrest is sloped.
11. An apparatus comprising:
a seat portion having a first aperture; and
a back portion having a second aperture, wherein the seat portion and the back portion form a non-planar support surface to support a human, and the first aperture and the second aperture form a composite aperture in the support surface, so that the human's anus is proximate to the composite aperture.
12. The apparatus of claim 11, further comprising:
means for viewing to view a portion of the human visible through the aperture.

13. The apparatus of claim 11, further comprising:
means for privacy to limit a view of the human.

14. The apparatus of claim 11, further comprising:
means for providing mobility to the support surface.

15. The apparatus of claim 11, wherein the support surface is selected from
the group consisting of a chair and a bench.
Dependent Claims B2-B5 – second aperture in V-portion, viewing means, privacy
means, wheels, bench.

16. The apparatus of claim 11, wherein the seat portion is concave.

17. The apparatus of claim 11, further comprising:
means for supporting the human's arms.

18. The apparatus of claim 11, further comprising:
an armrest coupled with the support surface.

19. The apparatus of claim 18, wherein the armrest is sloped.

20. A support surface for a human comprising:

a back portion;
a seat portion having an aperture opening toward the back portion; and
a frame coupling the seat portion with the back portion, so that when the human is supported on the support surface, the human's anus is proximate to the aperture.

21. The apparatus of claim 20, wherein the back portion having an aperture that merges with the aperture in the seat portion.

22. The apparatus of claim 20, further comprising:
means for viewing to view a portion of the human visible through the aperture.

23. The apparatus of claim 20, further comprising:
means for privacy to limit a view of the human.

24. The apparatus of claim 20, further comprising:
means for providing mobility to the support surface.

25. The apparatus of claim 20, wherein the support surface is selected from the group consisting of a chair and a bench.

26. The apparatus of claim 20, wherein the seat portion is concave.

27. The apparatus of claim 20, further comprising:
means for supporting the human's arms.
28. The apparatus of claim 20, further comprising:
an armrest coupled with the support surface.
29. The apparatus of claim 28, wherein the armrest is sloped.
30. A support surface for a human comprising:
a first portion having an aperture; and
a second portion flexibly coupled with the first portion , wherein the
aperture extends toward the second portion and an angle between the first
portion and the second portion is adjustable so that when the human is
supported on the support surface the human's anus is proximate to the aperture.
31. The apparatus of claim 30, the second portion having an aperture that
merges with the aperture in the first portion.
32. The apparatus of claim 30, further comprising:
means for viewing to view a portion of the human visible through the
aperture.

33. The apparatus of claim 30, further comprising:
means for privacy to limit a view of the human.

34. The apparatus of claim 30, further comprising:
means for providing mobility to the support surface.

35. The apparatus of claim 30, wherein the support surface is selected from the group consisting of a chair, a bench, and a bed.

36. The apparatus of claim 30, wherein the first portion is concave.

37. The apparatus of claim 30, further comprising:
means for supporting the human's arms.

38. The apparatus of claim 30, further comprising:
an armrest coupled with the support surface.

39. The apparatus of claim 38, wherein the armrest is sloped.

40. A support surface for a human comprising:
a back portion having an aperture;

a seat portion having an aperture opening toward and merging with the aperture in the back portion to form a composite aperture wherein the human's anus is to be positioned proximate to the composite aperture;

a frame coupling the seat portion with the back portion;

means for viewing to facilitate viewing a portion of the human; and

means for privacy to limit a view of the human.

41. The apparatus of claim 40, further comprising:

means for providing mobility to the support surface.

42. The apparatus of claim 40, wherein the support surface is selected from the group consisting of a chair and a bench.

43. The apparatus of claim 40, wherein the seat portion is concave.

44. The apparatus of claim 40, further comprising:

an arm rest having a front end and a back end, the front end configured higher than the back end.

45. A method comprising:

supporting a human on a support surface; and

cleaning an anal region of the human by accessing the anal region through an aperture in the support surface.

46. A method comprising:
- supporting a human on a support surface; and
- inspecting an area of the human selected from the group consisting of a lower spine region and an anal region by accessing the human through an aperture in the support surface.
47. The method of claim 46, further comprising:
- administering medical services to the human through the aperture in the support surface.
